bioinspired energy efficient facade systems

- adaptive
- multifunctional
- integrated
- dispersed
- energy efficient
- communicative

facade issues

light →
heat protection
air exchange
cooling
energy
transport
sustainability

40 detailed questions biologised

change/filter/control wavelength
transmit light with minimal loss of
intensity
direct/guide light →
bundle light
intensify light - luminosity
use light effectively
transmit light over (long) distances
generate light
transmit light selectively
disperse/scatter light
generate constant luminance/light
density
change/control transmission factor
change/control
reflectance/reflectivity
generate sunshade
avoid light
react/adapt to changing light
conditions

database of 240 models

Fibers guide light: venus flower
basket
Facets in insects
Leaves focus light: begonias
Lenses in eyes
Crustacean optical systems
Brittlestar calcite microlenses
Butterfly scales - structural colours
Feathers - reflectivity and structure

database of 240 models from nature

Fibers guide light: venus flower basket
Facets in insects
Leaves focus light: begonias

Lenses in eyes
Crustacean optical systems

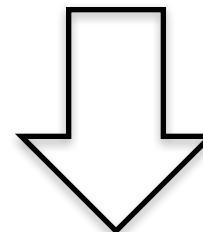

Brittlestar calcite microlenses
Butterfly scales - structural colours
Feathers - reflectivity and structure

abstraction of principles and 30 selected models

- light transfer by fibres and crystals
venus flower basket
- light transfer by lenses and facets
facets in insects
- photonic structure
brittlestar calcite microlenses

priorisation according to:

- facade technology
- technological transferability
- scalability of phenomenon
- availability of basic research

development of
technical concepts

self shading by shape

cacti

assumption
area: ~ 450m²
height: 80m
8 different shapes

analysis:

influence of shape on energy management
self shading – passive cooling effect

GrAB

GrAB - Growing As Building

takes growth patterns and dynamics from nature and applies them to architecture with the goal of creating a new living architecture.

GOALS

1. Study of biological growth principles

Computational & experimentation

2. Integration of biology in material systems

Computational & experimentation with living organisms

3. Interventions in existing architecture
